ABSTRACT

Sex composition of the human Population is denoted as sex ratio of Population of an area at given point of time. Sex ratio is product of the interplay of many aspects and determines the several aspects of the future. It is one of the crucial indicators of socio-economic and cultural development of a society. Imbalance of sex ratio causes many socio-economic, cultural and demographic implications. The present paper aims at examines the sex composition of Scheduled Tribe Population in rural and urban areas of Andhra Pradesh and its districts based on 2011 census data and suggestion are made for improving the sex ratios of Scheduled Tribes.
